

# OPEN INTERNET

[openfiber.it/en](http://openfiber.it/en)

**O**pen Internet is a service offered by **Open Fiber**, designed for anyone who wants to become a **Fixed Virtual Network Operator (FVNO)** and offer an **end-to-end fiber** Internet access service, without investing in network infrastructure.

A simple solution that allows you to enter the **TLC** market with the highest performance.

## SERVICE SPECIFICATIONS

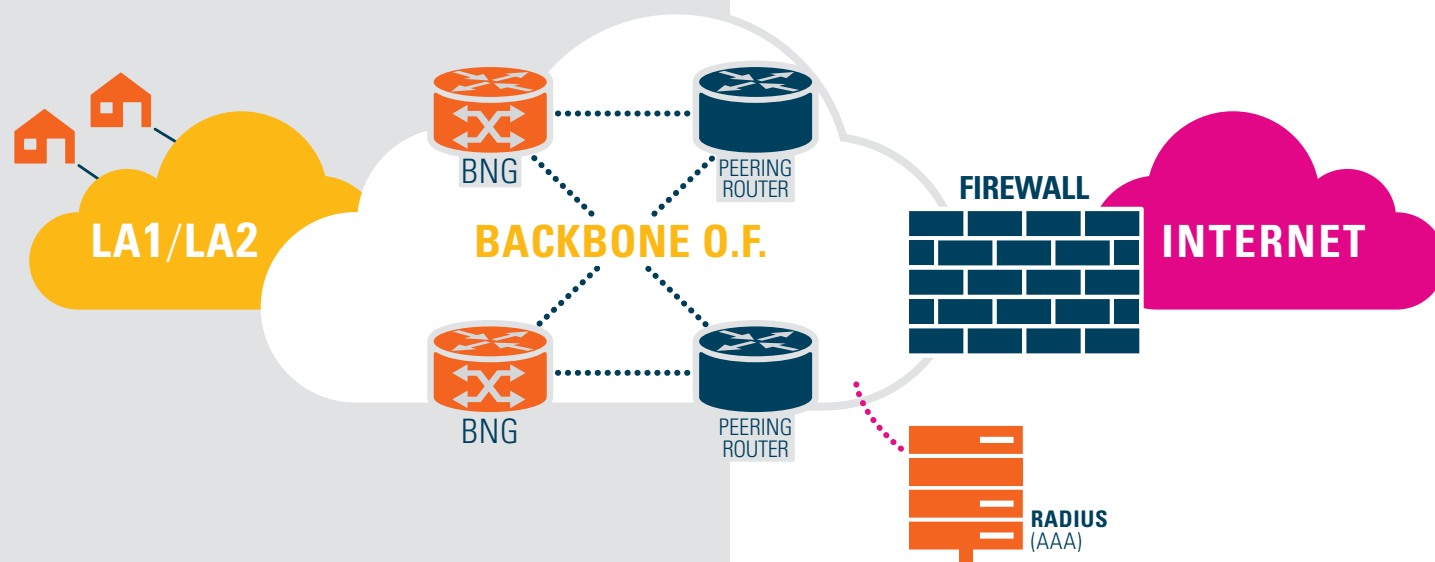

- Nationwide coverage.
- GPON FTTH access technology.
- No investment required in network infrastructure development.
- Internet access and interconnection to content providers in the main Italian Internet eXchange Points.
- Reduced time to market.
- Dedicated technical assistance.

## SERVICE DESCRIPTION

**D**esigned to offer a “turnkey” service, Open Internet allows you to provide an Internet access service via the Open Fiber network.

Open Fiber provides all the technical support required to deliver Internet access (including end user authentication/authorisation/accounting, IP address assignment, fault and malfunction management), as well as residential gateway supply and management.
