

HOUSING

openfiber.it/en

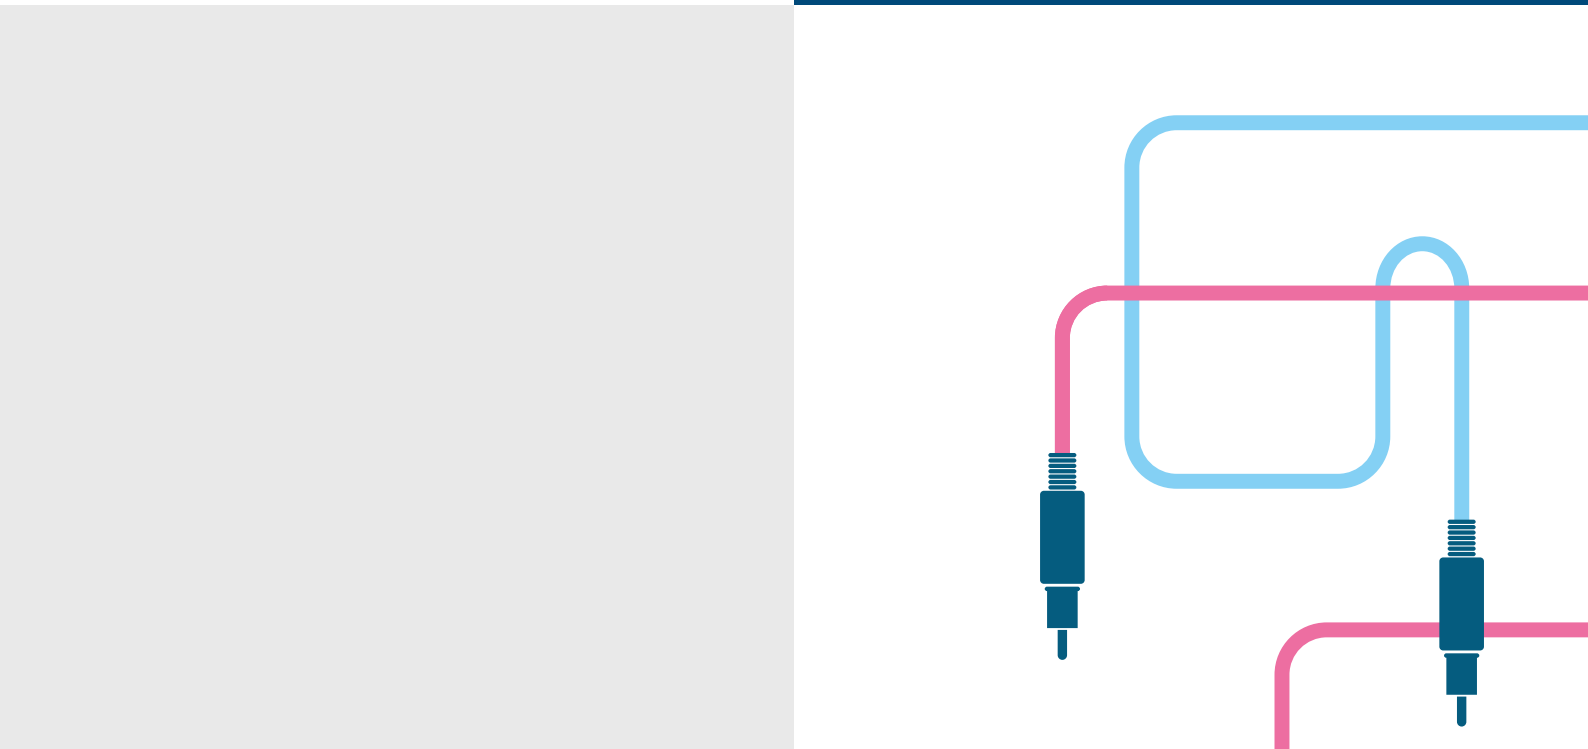

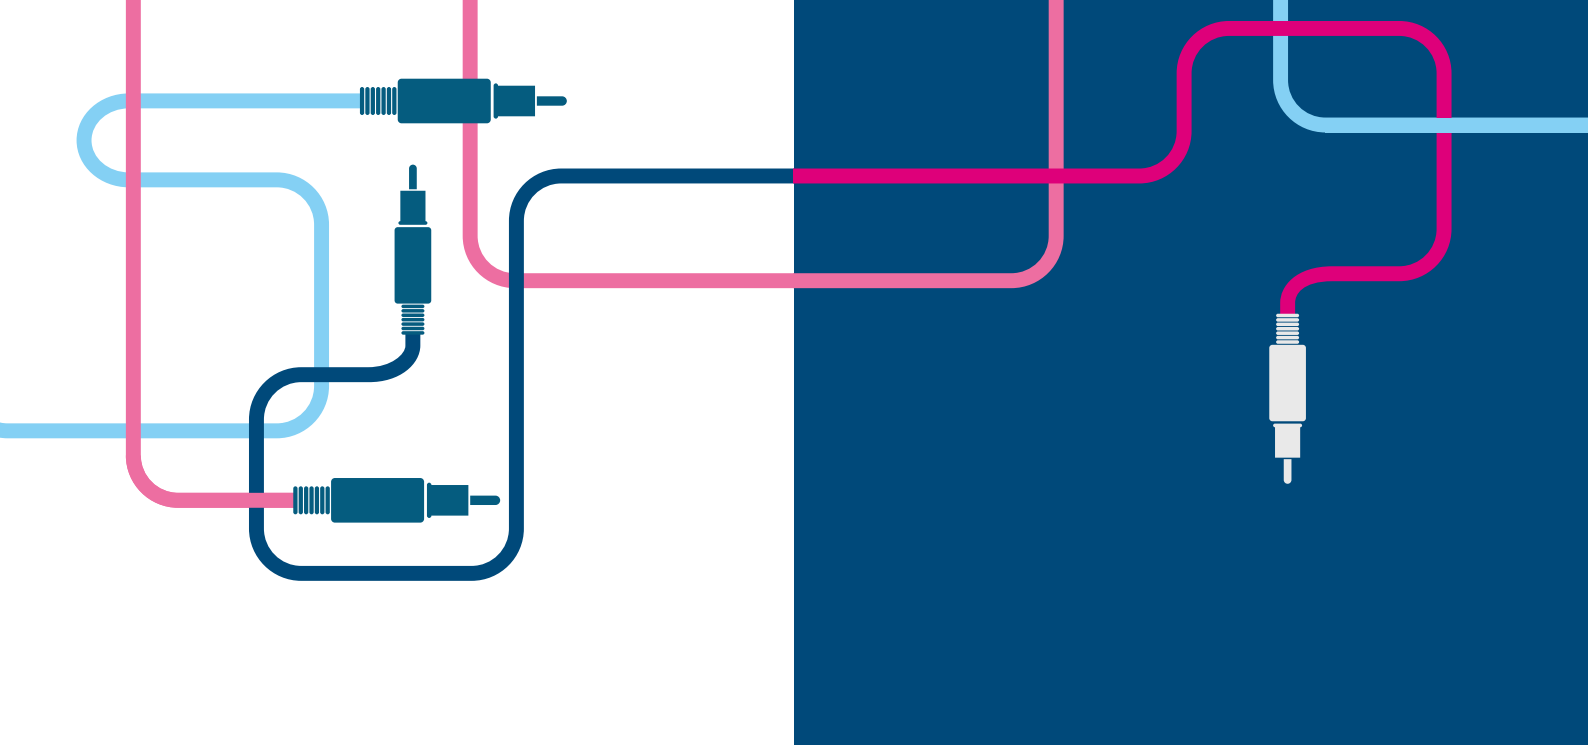

The **Open Fiber's HOUSING** service consists of providing the Operator with a Rack space on which the Operator's transmission equipment will be installed.

SERVICE DESCRIPTION

The Housing Service offer a sub-rack or full rack for installing the Operator's Transmission Equipment. The Housing Service includes power supply (agreed KW), air conditioning, maintenance, cleaning, security and site surveillance services.

If the Operator relies on self-provided backhauling services, the connection with Open Fiber's optical fibres will be released in the manhole adjacent to the PoP.

Should the Operator's Transmission System require a greater amount of power than originally agreed, the amount of KW will be adjusted accordingly. In addition, Open Fiber makes available a redundant -48 VCC power supply.
